

HONEY PRODUCTS

Working wonders for health and beauty.

The wonders that little bees can achieve with their organisation and distribution of work are astonishing. Their honeycombs, constructed from the finest beeswax, are like works of art. Drop by drop they gather nectar and honeydew to produce wonderful, sweet honey. At the same time they collect a varied mixture of pollen, which contains many valuable nutrients.

Pollen is the basis for royal jelly, a nutritional drink that boosts the queen bee's size and fertility.

Propolis, the complex putty-resin compound of the bees, has still not been completely decoded by scientists. Yet all these bee products are beneficial to human health. This even includes bee venom, which is also used for healing purposes.
